PROJECTS

Concrete Compressive Strength Prediction | Machine Learning

- Developed Built an ML-powered web application to instantly predict concrete compressive strength, replacing the traditional 28-day testing process.
- Collected and preprocessed Kaggle dataset (1,030 samples, 8 features) with outlier removal (IQR method) and data scaling.
- Performed EDA and trained multiple regression models (Linear Regression, Decision Tree, Random Forest, XGBoost, MultiOutput Regressor).
- Achieved highest performance with Random Forest Regressor after hyperparameter tuning using RandomizedSearchCV.
- Evaluated models using R^2, RMSE, and Adjusted R^2 metrics; improved accuracy over SVM and KNN baselines. Deployed the best model using Flask, enabling real-time strength and grade predictions through an interactive web UI.
